

Hi,

Hope you're well. Congratulations on making it to the next round of the interview process.

Please find below the information for the technical test.

There is a simple web application currently running at this location:

- Samuel-Babalola-2024-06-21.cookieclickertechtest.airelogic.com

It's a simple (and very buggy) clone of the highly popular cookie clicker game.

Of which the original can be seen here:

- <https://orteil.dashnet.org/cookieclicker/>

Not sure what Cooky Clicker is? Check out its wiki page here:

- https://en.wikipedia.org/wiki/Cookie_Clicker

Your task:

- Your task is to produce some tests for this application, using whatever approach and tools you like.
- Please send us a list of the scenarios you have created as Manual or Automation scripts.
- Be sure to send us any code you produce, this can be in a GIT repo of your choosing. For example <https://bitbucket.org/>
- List any bugs that you identify
- We don't expect you to spend more than 4 hours on this but if you choose to spend more it's entirely up to you. So don't worry if there's more you would have liked to have done, but feel free to mention "if I'd had more time, I would have liked to..." etc.

Please reply to this email with the information to your solution.

Please note that the deadline for this submission is one week after this email has been sent.

Best of luck,
Grace Giles
